

# Plans for Hydraulic Break Stop for #409 Jackson Press

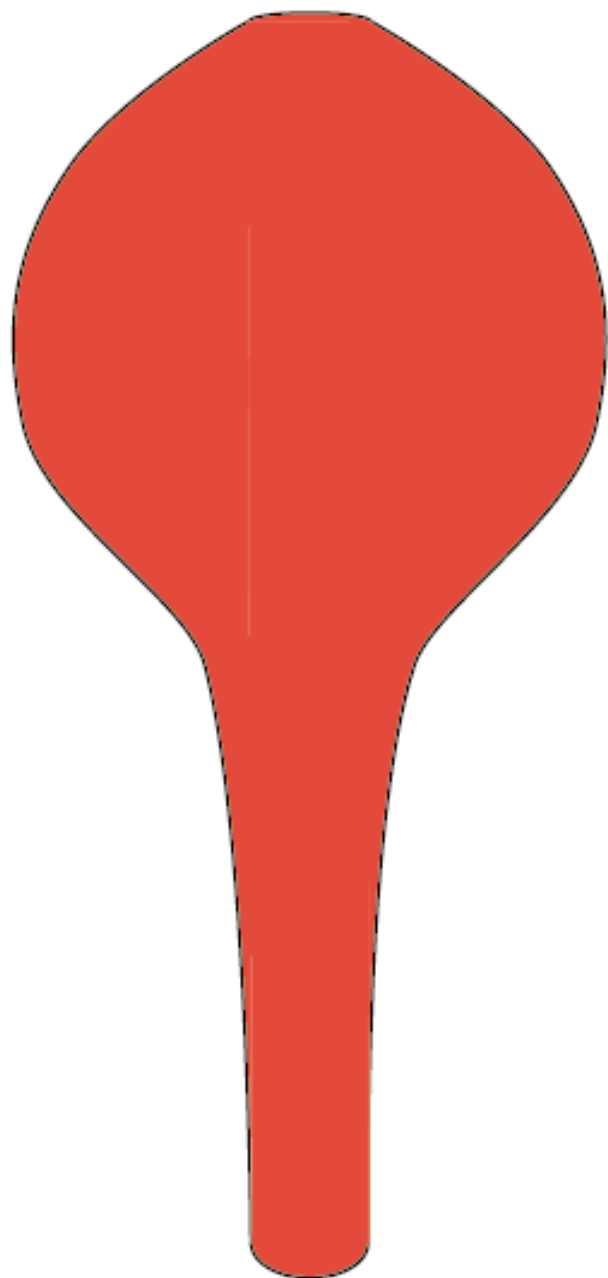

**All units will have chamfered corners on both the O.D. and I.D. All units will have 1/16th" hole dead center through length. Center bore must be smooth inside so sanding (rat tail rasp?) may be required. Outside surface must be smooth and paintable. Tapered length and angle is the same on all units.**

**By agreeing to see this document all outside parties agree to standard U.S. non-compete clause and will not manufacture for own self use.**
